INTERNSHIP PROCESS

Week 0 — Design Glossary

Key UX terms defined at the start of the internship.

Design Glossary

Design System

A design system is a collection of reusable components, guidelines, and principles that help create consistent digital products.

Design Token

A design token is a small, reusable value such as a color, spacing, typography, or radius variable used to maintain design consistency.

Wireframe

A wireframe is a basic visual layout of a product that shows structure, content placement, and user flow without detailed styling.

Hi-Fi

A hi-fi (high-fidelity) design is a detailed visual representation of a final product including colors, typography, images, and interactions.

Journey Map

A journey map is a visual representation of a user's experience, showing their actions, thoughts, emotions, and pain points across different stages.

Touchpoint

A touchpoint is any interaction or moment where a user connects with a product, service, or brand.

Edge Case

An edge case is an uncommon situation or unexpected user scenario that a design should handle to provide a reliable experience.

A/B Test

An A/B test is a method of comparing two versions of a design or feature to determine which performs better based on user behavior.

WCAG AA

WCAG AA is an accessibility standard level that provides guidelines for making digital products usable for people with different abilities.

Micro-interaction

A micro-interaction is a small design response, such as an animation, feedback message, or button state, that improves user experience.

Conversion vs Cart Abandonment

Conversion refers to users successfully completing a desired action, such as purchasing a product, while cart abandonment occurs when users add items to their cart but leave before completing checkout.
