## INTERNSHIP PROCESS

# Week 2 — User Flows & Pricing

Happy-path journey, error recovery branches, and e-commerce pricing.

- It took me some time to understand happy-path journey sequence. Initially, I used a different method where I listed the information present on each page and organized it into boxes. Later, I realized that wasn't the right approach, so I revised my work and structured it properly.
- I learned how to brainstorm different branches of a user flow and how to design recovery paths for various error scenarios, such as declined payments, invalid addresses, and other checkout issues. I also understood the reasons why these failures occur.
- I learned how product pricing works, including MRP, taxes, shipping charges, discounts, and platform fees. I explored how e-commerce platforms offer discounts and the roles of sellers, brands, and platforms in pricing. Most importantly, I learned that users care about the final price they pay and whether they feel they are getting a fair deal before making a purchase.
