INTERNSHIP PROCESS

Week 5 — Screen Iterations & WCAG

Per-screen UX changes, component fixes, and a WCAG 2.2 AA contrast audit.

Screen Changes

Tracking all the design iterations, component fixes, and UX improvements made while building out these screens.

Screen Changes: Cart in Collapsed State

- **Progress Stepper:** Fix the alignment and color of the `{ProgressStepper}` component.
- **Card:** Reduce the delete icon size from **15px to 13px**.
- **Save for Later:** Change the text style from highlighted to dim by setting the opacity to **70%**. Also, reduce the typography size from **16px to 14px**.
- **Button Spacing:** Reduce the spacing between buttons.
- **Coupons:**
 - Change the color fill and outer stroke of the **Applied** button from 100% cyan to a gradient to highlight that the coupon has been applied.
 - Reduce the **Remove** button typography size from **16px to 11px**.
- **Proceed Button:** Increase the size of the **Proceed** button from small to big, and add a message showing the remaining/consisting steps.

- **Navigation Bar:** Reduce the number of icons from 5 to 4 by removing the **Wishlist** icon. The active icons should now be: {Home, Search, Cart, Profile}.
 - **Color Consistency:** Use a consistent color scheme to reduce friction and eye strain for the user, as the previous design caused eye strain due to having too many colors.
 - **Color Purpose:** Define a clear purpose for each color used; remember its naming convention.
-

Cart: Out of Stock

- Reduce the opacity of the "Out of Stock" bar.
 - Change the color of the warning triangle icon (\$\triangle\$) from red to yellow.
 - Change the copy from {incomplete order...} to {Out of stock description: "This item is currently no longer available"}.
 - **For the card containing the item that is unavailable:**
 - It should be highlighted in the same color used for "Out of Stock".
 - Remove the quantity selector (no. of qty) and replace it with a **"Notify me"** button.
 - Remove the "Low inventory / recently sold out" text and replace it with **"See similar products"**.
 - Change the action button to an **"Add"** button.
 - Add a **"See similar products"** link/button.
 - Clearly mark it as **"Out of Stock"**.
-

Payment Method

- Add a recommendation message: {In your previous order, you used another payment option: COD}.
 - Separate the section so it doesn't look joined together.
 - Reduce the opacity of the bar.
-

Order Placed Success

- Add a gradient to the page for a pop-up message to highlight the success.
- Add a small description message: "Thank you for your purchase".

Track Order

- Add an order number along with an **"In Transit"** button styled with a gradient to highlight it.
- Display the carrier name (e.g., **Carrier: FedEx**), so the user doesn't get confused.
- Provide detailed tracking history and add a map in **dark mode** to match the overall color vibe.

Accessibility & UI Design Notes

- **Contrast Ratio:** Check the text/background pair to ensure it is recorded with a measured contrast ratio of $> 4.5:1$.
- **UI Hierarchy & Meaning:** Give a clear sense of purpose to every UI page.
- **Tab Order Annotations:** Create an intended tab-order annotation document for the payments and declined card screens, keeping keyboard navigation and focus management in mind.
- **Interaction Documentation:** Detail how it works, understand why this is important, and outline exactly how the user interacts with it.
