

Taak: Synthesize both sessions into a 1-2 page usability-findings.pdf with three sections: top 3 confusions, 1 biggest surprise, and 3 specific fixes you will apply in week 7.

Participant 1

Top 3 Confusions

1. Unsure whether **Guest Checkout** comes before or after the cart.
2. Unsure if removing the current coupon would permanently remove the discount.
3. Confused when the new coupon was unavailable and whether the previous coupon could be restored.

Biggest Surprise

"I can continue without creating an account."

3 Specific Future Fixes

- Increase the visibility of the **Continue as Guest** option.
 - Show a confirmation dialog before replacing an applied coupon.
 - Display a message explaining whether the previous coupon is restored or removed after an invalid coupon attempt.
-

Participant 2

Top 3 Confusions

1. Unsure whether the payment failed because of the **CVV** or another card detail.
2. Unsure if tapping **Retry Transaction** would charge the card twice.
3. Unsure whether all payment details needed to be entered again.

Biggest Surprise

"I only had to correct the incorrect field instead of filling everything again."

3 Specific Future Fixes

- Highlight the exact field causing the payment error (e.g., CVV).
- Add reassurance such as "**No payment was processed. Please correct the highlighted field.**"
- Preserve previously entered payment details after a failed transaction.

This format is concise, realistic, and directly ties each usability finding to a future design improvement.
